DETAILED ACTION

Drawings

1. Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Specification

2. The following guidelines illustrate the preferred layout and content for patent applications. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

The following order or arrangement is preferred in framing the specification and, except for the reference to "Microfiche Appendix" and the drawings, each of the lettered items should appear in upper case, without underlining or bold type, as section headings. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) Title of the Invention.
- (b) Cross-References to Related Applications.
- (c) Statement Regarding Federally Sponsored Research or Development.
- (d) Reference to a "Microfiche Appendix" (see 37 CFR 1.96).
- (e) Background of the Invention.
 1. Field of the Invention.
 2. Description of the Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) Brief Summary of the Invention.
- (g) Brief Description of the Several Views of the Drawing(s).
- (h) Detailed Description of the Invention.
- (i) Claim or Claims (commencing on a separate sheet).
- (j) Abstract of the Disclosure (commencing on a separate sheet).
- (k) Drawings.
- (l) Sequence Listing (see 37 CFR 1.821-1.825).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

Art Unit: 2841

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards [US 4,580,193].

Edwards discloses in Fig. 1 a conductor track layer structure precursor stage (6) having a plurality of conductor track (15) disposed on an electrically insulating substrate; said electrically insulating substrate having an inner region and a lateral peripheral region; the conductor tracks connected via conductor track current lines to at least one current line (see attachment for details); wherein the current line extends in the lateral peripheral region of the conductor track layer structure precursor stage; the conductor tracks are each connected to the at least current line via a separate conductor track current line, and the conductor tracks inside the inner region of the conductor track layer structure precursor stage are electrically insulated from one another.

It is noted that the product-by-process limitation of claim 4 has not been give weight in determining the patentability of the device claim. See MPEP §2113.

5. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Janai et al. [US 5,541,814].

Janai et al. disclose in Fig. 2 (also see attachment for details) a conductor track layer structure precursor stage having a plurality of conductor track disposed on an electrically insulating substrate; said electrically insulating substrate having an inner region and a lateral peripheral region; the conductor tracks connected via conductor track current lines (36) to at least one current line (38); wherein the current line extends in the lateral peripheral region of the conductor track layer structure precursor stage; the conductor tracks are each connected to the at least current line via a separate conductor track current line, and the conductor tracks inside

Art Unit: 2841

the inner region of the conductor track layer structure precursor stage are electrically insulated from one another.

It is noted that the product-by-process limitation of claim 4 has not been give weight in determining the patentability of the device claim. See MPEP §2113.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Baker [US 3,061,911], Mermet-Guyennet [US 5,243,496] and Kurashima [US 5,365,406] disclose conductor tracks connected with conductor track current lines.
